Permits **+**

by Arose Engineering

SOFTWARE AS A SERVICE

Imagine a software system that doesn't charge for each user in your office. Imagine being able to install this system on as many devices as you need without concern of additional fees.

A system available with or without an Internet connection where all data is stored and can be accessed anywhere, eliminating the need to manage, maintain and back up your work.

Now imagine that software system updates itself regularly adding new features, functionality, forms and reports.

What if all this was included in a simple annual cost?

Permits + adopts an affordable Software as a Service (SAS) model.

Arose consists of experts in product development and technology. Experienced and educated, our people have provided professional solutions in the Health Services and Insurance industries (EHR systems), Transportation and Logistics industries (TMS systems), Manufacturing and Product/Client Management systems, Business to Business communications and collaboration systems. We've worked alongside local, state and federal partners and are accustomed to complying with various government technology regulations and standards.
